PACT: Commercial Contract and Electronic Evidence Notary System

A Non-Technical Comprehensive Project Report on Formalizing Informal MSME Commerce through Autonomous Statutory Auditing and Cryptographic Evidence Certificates

PROJECT NAME	TEAM NAME	TEAM MEMBERS	HACKATHON TRACK
Project PACT	Team Agentics	Mohammed Ibrahim & Prabhanjan More	Legal Services (Code: LS-06)
EVALUATION DEADLINE	**PRIMARY STATUTES**	**TARGET BENEFICIARIES**	**SOURCE CODE REPOSITORY**
10:00 AM, October 26, 2026	ICA 1872, BSA 2023, MSMED 2006	63M+ Indian MSME Merchants	github.com/MDIbrahim08/PACT

EXECUTIVE SUMMARY

In India, over 63 million Micro, Small, and Medium Enterprises (MSMEs) contribute approximately thirty percent of the national Gross Domestic Product and nearly half of total exports. Despite their economic significance, more than ninety percent of domestic business-to-business transactions are conducted informally through casual WhatsApp messages, telephone conversations, and regional voice recordings. Small enterprise proprietors consistently avoid traditional multi-page legal agreements because drafting contracts requires formal legal counsel, entails prohibitive expenses ranging from three thousand to fifteen thousand rupees per deal, and carries social stigma where requesting a written contract is perceived as an expression of personal distrust.

As a direct consequence of operating on informal handshakes, small suppliers face severe vulnerabilities. When corporate or wholesale buyers delay or default on payments, suppliers lack legally admissible documentation to enforce claims before judicial magistrates or statutory arbitration councils. According to official industry assessments, Indian MSMEs suffer from an estimated 10.7 Lakh Crore Rupees in delayed and locked working capital.

Project PACT resolves this crisis by introducing an invisible, automated commercial notary. PACT operates directly within the merchant's natural communication workflow. It ingests conversational agreements, audits them against the essential requirements of Section 10 of the Indian Contract Act, 1872, detects ambiguous terms that would void an agreement under Section 29, applies statutory credit ceilings under the MSMED Act, 2006, and generates tamper-evident electronic evidence certificates compliant with Section 63(4) of the Bharatiya Sakshya Adhiniyam, 2023. By packaging these checks into polite, automated summaries dispatched through standard WhatsApp, PACT eliminates social friction while delivering full legal enforceability.

1. SELECTED PROBLEM STATEMENT

Official Problem Definition: Transforming informal commercial communication (including messaging platform text, voice recordings, and trade discussions) into legally binding, court-admissible commercial contracts for Indian Micro, Small, and Medium Enterprises under the Indian Contract Act, 1872 and the Bharatiya Sakshya Adhiniyam, 2023.

The project addresses three fundamental legal and commercial breakdowns in informal Indian trade:

- *The Contractual Formality Barrier:* The conventional process of drafting formal legal agreements is socially awkward, procedurally slow, and commercially impractical for high-velocity daily wholesale trade.
- *The Electronic Evidence Inadmissibility Trap:* Ordinary screenshots of chat conversations are routinely rejected as unauthenticated hearsay by courts and arbitration tribunals because digital images can be forged or manipulated effortlessly without leaving visible artifacts.
- *The Asymmetry of Bargaining Power:* Small vendors lack the leverage to demand prompt payment terms from larger institutional buyers, leading to severe payment delays that exceed statutory limits established by Parliament.

2. PROBLEM UNDERSTANDING AND CONTEXT

Understanding the day-to-day operations of Indian wholesale trading clusters reveals why existing legal technologies have failed to penetrate the MSME sector. In industrial clusters such as Surat (textiles), Moradabad (brassware), Rajkot (engineering components), and Delhi (packaging), commerce is relationship-driven. When a buyer places an order over WhatsApp with a short voice note, requesting a signed ten-page legal agreement causes immediate friction, often prompting the buyer to redirect the order to a competitor.

Consequently, merchants rely on mutual trust. However, when economic shocks or commercial disputes occur, this trust breaks down:

- *Uncertain Terms under Section 29:* Informally negotiated terms frequently contain ambiguous statements such as "we will settle accounts after delivery" or "payment will follow after festival sales." Under Section 29 of the Indian Contract Act, 1872, agreements whose meaning is not certain or capable of being made certain are void ab initio.
- *Judicial Requirements under Section 63(4) of Bharatiya Sakshya Adhiniyam, 2023:* The Indian judicial system enforces strict criteria for electronic evidence. For an electronic record to be admitted into evidence without producing the original computer system, the party must present a certificate identifying the electronic record, describing the device used, confirming lawful control, and establishing system integrity. Raw printouts or screenshots without cryptographic hashing fail this legal test.
- *Statutory Protections Ignored:* The Micro, Small and Medium Enterprises Development Act, 2006 provides strong legal rights, including a mandatory forty-five-day payment ceiling under Section 15 and compound interest at three times the Reserve Bank of India bank rate under Section 16. However, suppliers rarely invoke these provisions because they lack dated, verified records of the agreed terms.

3. PROPOSED SOLUTION

Project PACT introduces an automated, neutral commercial assistant and electronic notary that integrates seamlessly into informal trade. The system converts raw conversations into legally verified agreements through five sequential steps:

1. *Informal Ingestion:* The system accepts voice notes in regional languages or plain text conversation transcripts directly from messaging tools.
2. *Semantic Term Structuring:* The system extracts the vital commercial terms: participating parties, item description, exact quantities, pricing, delivery schedule, and credit terms.
3. *Deterministic Statutory Audit:* The extracted terms are audited against statutory rules to confirm compliance with Section 10 and Section 29 of the Indian Contract Act, 1872 and Section 15 of the MSMED Act, 2006.
4. *Cryptographic Evidence Sealing:* The validated contract terms are converted into a canonical representation and sealed with a dual-node SHA-256 cryptographic digest, generating an electronic certificate compliant with Section 63(4) of the Bharatiya Sakshya Adhiniyam, 2023.
5. *Automated WhatsApp Dispatch:* The system generates an actionable link that opens a direct WhatsApp conversation with the buyer, delivering a concise, polite contract summary bearing the cryptographic verification seal.

The "Blame-the-Bot" Social Paradigm: To eliminate social friction, PACT enables the supplier to present the verification as an automated accounting procedure: *"Our automated accounting system requires confirmation of the delivery date to generate our GST e-stamp certificate. Please confirm so the order can be processed."* This preserves the personal relationship while securing legal enforceability.

4. INNOVATION AND UNIQUENESS

PACT represents a fundamental departure from both traditional legal services and generic artificial intelligence chatbot wrappers. The following comparative matrix outlines these key differences:

DIMENSION	TRADITIONAL LEGAL COUNSEL	GENERIC AI CHATBOTS	PROJECT PACT SYSTEM
Commercial Friction	High; drafting contracts alienates counterparties and slows transactions.	Moderate; generates long legal text unsuitable for messaging.	Zero; uses polite, automated accounting summaries inside WhatsApp.
Cost per Transaction	Prohibitive; ranges from three thousand to fifteen thousand rupees.	Subscription-based; requires individual user software licenses.	Negligible; fractional serverless cost under ten paise per transaction.
Legal Precision	High, but dependent on manual lawyer availability and review time.	Low; frequently invents non-existent legal sections and citations.	One hundred percent deterministic; audited against statutory rule tables.
Court Admissibility	Requires lawyer testimony, formal affidavits, and physical stamping.	None; plain text outputs have no evidentiary chain of custody.	Certified under Section 63(4) of BSA, 2023 with cryptographic hashes.
Counterparty Barrier	Both parties must sign lengthy physical or digital legal documents.	Both parties must navigate external software platforms.	Zero; the counterparty interacts using their existing WhatsApp app.
Data Privacy	Manual confidentiality dependent on legal office practices.	Transcripts stored on commercial cloud server databases.	Zero-storage architecture; data is evaluated in temporary memory.

5. SYSTEM WORKFLOW AND FUNCTIONAL OVERVIEW

The system workflow is designed for maximum simplicity for the merchant, with rigorous legal checks occurring automatically behind the scenes.

Step-by-Step Functional Workflow

1. *Input Capture:* The merchant speaks a brief voice note in their native tongue or pastes recent chat messages into the PACT interface.
2. *Transcription and Structuring:* The input is converted into clean text and structured into standardized commercial fields: Buyer Identity, Seller Identity, Scope of Goods, Total Consideration, Delivery Milestone, and Settlement Terms.
3. *Statutory Five-Pillar Audit:* The system verifies the five statutory requirements under Section 10 of the Indian Contract Act, 1872:
   - Offer and Acceptance: Mutual agreement on goods and specifications.
   - Lawful Consideration: Monetary value or commercial payment.
   - Competency of Parties: Natural or registered commercial entities.
   - Free Consent: Absence of coercive or unfair settlement clauses.
   - Lawful Object: Goods and transactions permitted under Indian trade law.

4. *Ambiguity Detection and Credit Auditing:* If critical milestones are vague, the system highlights missing terms. If payment terms exceed forty-five days, the system applies Section 15 of the MSMED Act, 2006, capping the period and calculating statutory interest.
5. *Cryptographic Hashing and Non-Repudiation:* A normalized data string is processed through the SHA-256 algorithm to generate a unique digital fingerprint. If any character in the contract terms is altered subsequently, the resulting hash changes completely, providing mathematical proof of tampering.
6. *Electronic Evidence Certificate Generation:* An electronic certificate is compiled containing device identifiers, time stamps, hash signatures, and legal declarations in strict accordance with the Fourth Schedule of the Bharatiya Sakshya Adhiniyam, 2023.
7. *Automated WhatsApp Dispatch:* A pre-formatted message is generated containing the summary terms and cryptographic seal, ready for one-touch delivery to the recipient's phone number.
8. *Independent Verification Portal:* Any judge, arbitrator, or party can paste the document text and hash into the public verification portal to immediately confirm document authenticity.

6. OPERATIONAL AND TECHNICAL FEASIBILITY

The architectural strategy prioritizes high availability, low operational cost, and zero software friction for trade counterparties:

- *Zero-Install Counterparty Access:* The single greatest barrier to legal technology adoption is requiring both trading partners to create accounts. PACT delivers the final contract directly through standard WhatsApp using standard universal telephony links, meaning buyers require zero onboarding.
- *Progressive Web Architecture for Godown Operations:* Wholesale markets and warehouse godowns often suffer from erratic cellular connectivity. The PACT interface is engineered as a Progressive Web Application with offline service caching and local cryptographic calculation capabilities.
- *Privacy-by-Design and Zero Data Retention:* To protect sensitive commercial trade secrets, PACT does not store merchant invoices, prices, or customer identities on central database servers. Transactions are processed in volatile execution memory and sealed with client-side cryptography. When an enterprise resets or uninstalls the application, all local cache keys are permanently purged.

7. IMPLEMENTATION DETAILS AND CORE MODULES

Project PACT is structured into seven distinct functional modules, each engineered for a specific commercial or legal responsibility:

MODULE NAME	FUNCTIONAL PURPOSE	UNDERLYING LEGAL OR TECHNICAL STANDARD
Voice and Text Ingestion Engine	Captures vernacular speech recordings and conversational text transcripts across multiple Indian languages.	Sub-350ms streaming speech-to-text pipeline supporting Hindi, Marathi, Gujarati, and Indian English.
Deterministic Statutory Auditor	Evaluates extracted contract parameters against rigid statutory criteria to determine legal validity.	Algorithmic rule engine enforcing Section 10 (validity) and Section 29 (uncertainty) of the Indian Contract Act, 1872.
MSME Credit Protection Sentinel	Identifies illegal or unreasonable payment delays and applies statutory interest calculations.	Enforces the mandatory 45-day ceiling under Section 15 and 3x RBI compound interest under Section 16 of MSMED Act, 2006.
Digital Evidence Notarization Engine	Computes canonical SHA-256 digests and compiles court-admissible electronic verification certificates.	Strict compliance with Section 63(4) of the Bharatiya Sakshya Adhiniyam, 2023 (electronic evidence admissibility).
WhatsApp Auto-Pilot Dispatcher	Formats certified notices and generates direct deep-links targeting specified counterparties.	Universal telephony communication protocol with pre-encoded statutory terms and evidence hash fingerprints.
Interactive Tamper Sandbox	Allows evaluators, judges, or merchants to test data integrity and observe instant tamper detection.	Timing-safe cryptographic comparison preventing side-channel attacks and demonstrating the cryptographic avalanche effect.
MSME Statutory Knowledge Library	Provides clear, plain-language guidance on eight fundamental commercial acts affecting Indian business owners.	Comprehensive legal library covering contract law, evidence admissibility, GST compliance, and dispute resolution.

8. COMPLETED FEATURES AND FUNCTIONAL CAPABILITIES

During the forty-eight-hour hackathon, the development team built and verified a fully working end-to-end software platform with the following operational capabilities:

- *Live Vernacular Speech Processing:* Real-time recording, transcription, and instant audio feedback enabling voice-first contract creation.
- *Automatic Ambiguity Radar:* Real-time analysis that highlights vague expressions and prompts the user for clarification before an agreement is dispatched.
- *Algorithmic Contract Validity Scoring:* An objective scoring indicator (0 to 100%) reflecting compliance with the five statutory pillars of contract law.
- *Simulated Non-Judicial e-Stamp Certificate Generation:* Generation of formal stamp paper certificates modeled after the official format of the Stock Holding Corporation of India Limited (SHCIL).
- *One-Touch WhatsApp Notice Dispatch:* Automated routing that resolves contact names (e.g., Salman Khan, Prabhanjan More, Mohammed Ibrahim) and opens WhatsApp with a pre-filled statutory notice.
- *Mathematical Tamper Detection Sandbox:* An interactive demonstration interface where changing any single character in a simulated transaction triggers an immediate tamper alert.

- *Desktop and Mobile Client Support:* Cross-platform responsive deployment capable of running on mobile browsers, tablets, and standalone desktop windows.
- *Complete Client Uninstallation and Sandbox Purge:* User-controlled settings allowing merchants to reset cached sessions, remove installed service workers, and purge cryptographic keys.

9. TESTING, VALIDATION AND VERIFICATION RESULTS

To verify functional reliability and legal correctness, the system was subjected to rigorous evaluation across six standardized test scenarios:

TEST ID	TEST SCENARIO AND INPUT	STATUTORY BENCHMARK	OBSERVED SYSTEM BEHAVIOR	OUTCOME
TC-01	Wholesale order for 10,000 packaging units at Rs 25 each. Delivery in 5 days. 30% advance, balance in 15 days.	Indian Contract Act, 1872 Section 10 (Full validity)	All five statutory pillars successfully identified. Validity score calculated at 100%. Formal e-stamp certificate minted.	Verified
TC-02	Wholesale buyer requests payment terms of ninety days following goods acceptance.	MSMED Act, 2006 Section 15 (Mandatory 45-day cap)	System flags credit term exceeding statutory maximum. Automatically caps period at 45 days and applies compound interest notice.	Verified
TC-03	Chat conversation states: "We will settle the final payment after goods delivery sometime next month."	Indian Contract Act, 1872 Section 29 (Void for uncertainty)	Ambiguity radar triggers. Flags absence of definite date. Generates polite clarification request for the supplier.	Verified
TC-04	Adversarial attempt to alter invoice amount from Rs 16,00,000 to Rs 10,00,000 after digital certificate creation.	Bharatiya Sakshya Adhiniyam, 2023 Section 63(4) (Data integrity)	Cryptographic SHA-256 hash mismatch detected immediately. System displays an unmistakable Tamper Detected alert.	Verified
TC-05	Voice prompt: "Send formal payment demand to Salman Khan regarding overdue delivery invoice."	Telephony Deep-Linking Protocol	Resolves contact directory entry for Salman Khan and opens WhatsApp with pre-filled Section 15 statutory demand notice.	Verified
TC-06	Execution of contract auditing while disconnected from cellular and internet networks.	Progressive Web Application Cache and W3C WebCrypto API	Application functions offline using cached service workers. Local cryptographic hash generated without external server call.	Verified

10. UTILIZATION OF ARTIFICIAL INTELLIGENCE AND MULTI-AGENT ARCHITECTURE

A critical architectural decision in Project PACT is the strict separation between perceptual language processing and deterministic statutory execution. The bot functions as a coordinated Multi-Agent System comprising eight specialized autonomous agents:

AGENT DESIGNATION	UNDERLYING ENGINE	PRIMARY OPERATIONAL RESPONSIBILITY	GOVERNING STANDARD
Acoustic & Speech Agent	Sarvam AI (saaras:v3) & ElevenLabs	Ingests regional voice recordings in Hindi, Marathi, and Gujarati; provides sub-350ms streaming voice feedback.	Multilingual Audio Perception
Conversational Parsing Agent	Google Gemini 2.5 Flash / Groq Llama-3.1	Transforms messy trade conversations and voice notes into normalized commercial deal parameters.	Semantic Entity Extraction
Deterministic Statutory Agent	Custom TypeScript Rule Engine (Non-AI)	Audits agreements against the five statutory contract pillars: consent, competency, consideration, object, and certainty.	Indian Contract Act, 1872 Section 10
Ambiguity Resolution Agent	Contextual Nudge Generator	Detects vague terms (e.g. payment after delivery) and drafts polite "Blame-the-Bot" clarification requests.	Indian Contract Act, 1872 Section 29
Payment Protection Sentinel	Financial Rule Calculation Engine	Enforces statutory 45-day payment limits and automatically calculates 3x RBI compound interest for delayed payments.	MSMED Act, 2006 Sections 15 & 16
Cryptographic Notary Agent	Node.js crypto (timingSafeEqual) & WebCrypto	Generates SHA-256 evidence digests, issues electronic certificates, and powers the Judge Tamper Sandbox.	Bharatiya Sakshya Adhiniyam, 2023 §63(4)
WhatsApp Auto-Pilot Agent	Telephony Protocol & MSME Directory Resolver	Resolves counterparty contacts (e.g. Salman Khan, Prabhanjan More) and launches pre-filled statutory dispatches.	Universal Telephony Protocol (wa.me)
Zero-Storage Privacy Agent	Session Memory & Sandbox Purge Controller	Guarantees zero central data retention, evaluates transactions ephemerally, and manages client install/uninstall lifecycles.	Digital Personal Data Protection Act, 2023

Strict Deterministic Boundary: No artificial intelligence model is permitted to evaluate contract validity, compute interest rates, or determine legal admissibility. All legal evaluations, statutory threshold comparisons, date validations, and cryptographic hash operations are executed by deterministic programmatic rules. This completely eliminates legal hallucinations, ensuring that every certificate generated is legally accurate and reproducible.

11. REAL-WORLD VIABILITY AND COMMERCIAL FEASIBILITY

The viability of Project PACT rests on its alignment with real-world commercial behavior:

- *Addressable Market Opportunity:* With over sixty-three million MSMEs in India conducting billions of informal transactions each year, even fractional adoption represents a massive commercial footprint.
- *Sustainable Economics:* Because deterministic statutory audits and cryptographic hashing execute in milliseconds on lightweight serverless infrastructure, the cost to process an individual transaction is less than ten paise. This makes PACT accessible to small-scale enterprises that could never afford conventional legal retainers.
- *Clear Commercial Monetization Paths:*
  - Tier 1: Free essential notarization for individual micro-enterprises conducting up to twenty transactions per month.
  - Tier 2: Modest subscription tier (one hundred to two hundred rupees per month) for medium wholesale vendors offering bulk WhatsApp routing, verified ledger exports, and formal certificate archiving.
  - Tier 3: Enterprise integration fees for supply chain financing platforms, non-banking financial companies (NBFCs), and trade credit underwriters.

12. POTENTIAL IMPACT AND SOCIO-ECONOMIC BENEFITS

Implementing automated commercial notarization delivers measurable socio-economic benefits:

- *Unlocking Delayed Working Capital:* By providing small suppliers with verifiable proof of delivery dates and agreed payment schedules, PACT dramatically strengthens the supplier's position when filing claims with the Micro and Small Enterprise Facilitation Councils (MSEFC / MSME Samadhaan).
- *Democratizing Legal Protection:* Legal security has traditionally been an expensive privilege reserved for large corporations with dedicated legal departments. PACT democratizes contractual enforceability, providing the same degree of legal protection to a rural artisan or wholesale cloth merchant as a multinational conglomerate.
- *Accelerating Dispute Resolution:* When commercial disputes are accompanied by cryptographically verified certificates and audit trails, judicial magistrates and arbitration mediators can bypass months of evidentiary hearings regarding whether an agreement existed, shortening dispute resolution from years to weeks.

13. CHALLENGES FACED AND SOLUTIONS IMPLEMENTED

During the design and construction of the platform, the engineering team overcame four major challenges:

- *Challenge 1: Regional Vernacular Ambiguity*. Informal voice notes frequently combine multiple languages and casual colloquialisms that confuse standard legal parsing.
  Solution: Engineered a dual-stage pipeline that first normalizes regional audio into standardized commercial entities before passing them to the statutory validator.
- *Challenge 2: Counterparty Reluctance to Adopt New Software*. Wholesale buyers consistently refuse to download proprietary applications or complete complex registration forms.
  Solution: Adopted a zero-barrier architecture that transmits certified notices directly through standard WhatsApp without requiring the recipient to install any software.
- *Challenge 3: Compliance with New Bharatiya Sakshya Adhiniyam Standards*. Ensuring that electronic certificates strictly adhere to the updated requirements of Section 63(4) of the 2023 statute rather than obsolete provisions.
  Solution: Formatted all electronic evidence certificates in exact conformity with the Fourth Schedule conditions, including device identification, custody certification, and cryptographic hash verification.
- *Challenge 4: Vulnerability to Cryptographic Timing Attacks*. Standard string comparison algorithms are vulnerable to timing analysis attacks when validating cryptographic hashes.
  Solution: Implemented constant-time comparison algorithms using native cryptographic timing-safe methods to ensure mathematical non-repudiation.

14. FUTURE ROADMAP AND STRATEGIC EXPANSION

Following the hackathon, the strategic roadmap for Project PACT encompasses three progressive development horizons:

- *Phase 1 (Quarter 1, 2027): Direct State Treasury e-Stamping Integration*. Establish official API integration with state digital e-stamping authorities (such as SHCIL) to enable automated purchase and affixation of digital judicial stamp paper directly within the application.
- *Phase 2 (Quarter 2, 2027): MSME Samadhaan Portal Integration*. Build automated filing pipelines that allow suppliers with defaulted invoices to compile complete evidence dossiers and submit claims directly to the Ministry of MSME Facilitation Council with a single click.
- *Phase 3 (Quarter 3, 2027): Trade Financing and Invoice Discounting Integration*. Connect verified, cryptographically sealed contracts directly to Trade Receivables Discounting System (TReDS) platforms, allowing banks and NBFCs to extend immediate working capital financing against certified purchase agreements.

15. CONCLUSION AND TEAM CONTRIBUTIONS

Project PACT proves that cutting-edge legal enforceability does not require complex legal jargon or expensive counsel. By harmonizing artificial intelligence for natural language communication with deterministic statutory logic and modern cryptography, PACT provides India's sixty-three million MSMEs with an invisible, socially harmonious shield against payment default and contractual uncertainty.

TEAM AGENTICS — ROLES AND HACKATHON RESPONSIBILITIES

Mohammed Ibrahim (Team Lead & Full-Stack Architect): System conceptualization, software architecture, implementation of the deterministic statutory verification engine, design of the SHA-256 evidence sealing pipeline, WhatsApp auto-pilot routing, and legal research into the Indian Contract Act, 1872 and Bharatiya Sakshya Adhiniyam, 2023.

Prabhanjan More (Co-Developer & Systems Engineer): Integration of multilingual speech-to-text pipelines, interactive legal reference library structuring, progressive web application configuration, cross-platform client validation, and execution of comprehensive test scenarios.

FORMAL STATUTORY AUTHORITIES REFERENCED

1. The Indian Contract Act, 1872 (Act No. 9 of 1872) — Section 10 (What agreements are contracts) and Section 29 (Agreements void for uncertainty).
2. The Bharatiya Sakshya Adhiniyam, 2023 (Act No. 47 of 2023) — Section 63 (Admissibility of electronic records in evidence) and Fourth Schedule.
3. The Micro, Small and Medium Enterprises Development Act, 2006 (Act No. 27 of 2006) — Section 15 (Liability of buyer to make payment) and Section 16 (Date from which and rate at which interest is payable).
4. The Information Technology Act, 2000 (Act No. 21 of 2000) — Section 4 (Legal recognition of electronic records) and Section 10A (Validity of contracts formed through electronic means).
